

Do you Cultivate Crops or Keep Animals/Horses on your Property?

Learn how you can ensure clean water through

Best Management Practices such as:

Conservation Plans

A document is created by the farmer and a conservation planner to identify resource concerns and create a plan of action.

Nutrient Management

These plans document nutrient sources and aim to keep them separate from clean waterways in the surrounding area.

Agricultural Funding and Technical Support

Funding programs are available to help agricultural landowners and operators implement practices that improve water quality.

For more information on these practices, visit

www.cwmp.org/farmer_resources For more information about

stormwater and agricultural requirements in
